

IT Consultancy Health Check

AT A GLANCE

- 1 day of consultation, free of charge
- Report detailing current problems and frustrations
- Recommendation of various solutions to address these issues
- Delivered by highly skilled and accredited engineers
- Encompassing physical and virtual environments, on and off premise

Engage the Experts

Viadex are so confident in the quality of our consultants that we are prepared to take the risk on ourselves and give away a free day of consultancy and reporting, to prove our worth.

The size of your business and current frustrations will influence how we deliver this day, tailoring it to your requirements to deliver the most possible value in the time available. For example a smaller business may choose to have our consultant reviewing their entire environment at a high level, against our known and proven best practises. A larger business for example, may choose to have us concentrate on a specific part of their infrastructure, where they know there are performance or security concerns.

We start with a scoping call, always conducted by a senior consultant, which allows us to agree which resource would be best suited to your environment and technologies deployed, to deliver the day of consulting.

We know that when we demonstrate our expertise, we become a trusted advisor and build long-term partnerships with our customers. This is a limited offer, subject to scope and approval, so contact us now to discuss your requirements.

WHO DOES THIS BENEFIT?

If you are looking at a new IT project or simply want to reduce the cost of your IT.

Viadex will assess and sanity check your existing vendors and providers to ensure your department is running at optimum performance. Viadex will demonstrate its expertise to help you define a robust IT strategy.
